

Infor XA Plus Products

Design Group provides enhancements for your Infor XA ERP software. With a variety of solutions designed to meet your business needs, our offerings will help to alleviate your biggest pain points. Integration, better security, and having more control over your software are just a few of the benefits that our solutions bring to the table. With our offerings, you will have more control over your ERP software than ever before.

Leverage Infor XA based security to manage your security, minimize issues with separation of duties, and reduce time in audits.

Best fit: Companies with lots of security maintenanceusually large or growing or high turnover. Also for any companies needing help with SOX or Separation of Duties checking.

Typical Pain Points: Can't keep up with security maintenance and poor audit performance.

Instead of receiving and issuing in separate steps, ReceivePlus allows you to do this all in one step Visibility of open Manufacturing Orders allows faster delivery to where the item is needed.

Best fit: Companies with heavy receiving or a need to get items to manufacturing quickly.

Typical Pain Points: Taking too long to separate incoming items and get them to the location they are needed.

Everybody has data from external sources that needs to be brought into their manufacturing system, whether it be updates from vendors, customers, or consolidation of data from different locations. ImportPlus makes use of the System-Link framework native to Infor XA to allow you to import data just by adding some structure information into a table. This solution is perfect for replacing offline loads, initial priming of data and everyday updates.

Best fit: Companies needing to bring in data from outside XA, whether that data is from Excel or any other systems.

Typical Pain Points: Lack of integration with outside vendors for status updates. Need to update XA data from spreadsheets such as ABC analysis or item class.

Infor XA itself does not provide for control of Engineering Changes. Disciplined changes to item and bill of material data is crucial to a smooth running manufacturing environment.

With ECPlus, engineers can change data via an external solution that allows documentation of the change and controlled release of updates to XA via a gatekeeper.

Best fit: Companies running EPDM that would like to add more control over engineering changes.

Typical Pain Points: Engineering changes that cause destabilization of the manufacturing operation.

Design Group operates from 45+ offices in the US and India providing engineering, consulting, and technical services to the world's leading companies in the Food & Beverage, Life Sciences, Advanced Technology, Industrial, and other market sectors. Our nearly 1500 technical and engineering experts have direct industry experience in industrial automation, control system integration, facility and process engineering, architecture, construction management, regulatory compliance, enterprise technology, and other consulting services.
